Computer Literacy classes for young women

Computer lab supported by Connection Ubuntu

The youth are an integral part in the development of our country. The GROW BIOINTENSIVE Agriculture Centre of Kenya (G-BIACK) aims to train as many youths as possible so as to reduce unemployment and idleness and increase productivity among our youths and especially young women. The G-BIACK's Girls Empowerment programme GEP targets and empowers young women from impoverished families and trains them in many areas that will help them to improve their livelihoods as they grow up to become adults.

G-BIACK has been teaching girls in computer literacy and information technology for the past 5 years. More than 300 students have graduated from this class. Students learn skills such as type setting, sending emails, conducting Internet research, creating word processing documents and creating presentations. These basic computer skills help students achieve success while they are learning other courses. The skills will also help them to become good entrepreneurs, improve their communication, enhance their employment opportunities, and also address the gap in their knowledge.

Appreciation goes to all our partners and friends for supporting this programme.
